

Chambers of Treasure

Thoughtless Games

Revision: 0.0.1

GDD Template Written by: Benjamin “HeadClot” Stanley

Target platforms

- Windows

Core Gameplay Mechanics Brief

- Stealth
- Loot
- Puzzle
- Explore

Monetization Model

- One time purchase with DLC releases to maintain longer support

Game Genre and Style

- **Genre:** stealth, looter, dungeon crawler
- **Play Style:** 3D first-person
- **Visual Style:** Low-Poly, 3D Stylized Art
- **Project Scope**
 - 28 days

- **Influences (Brief)**

- Decked Out

- Minecraft Minigame

- Chambers of Treasure takes inspiration from the minigame Decked Out. The base Clang Mechanic idea and oppressive enemies are both things that can be found in. such features were used as springboards for this game's implementation of similar ideas, where this game can take further advantage of the freedom granted by a full game engine..

- **The Elevator Pitch**

Loot the dungeon to loot the vault

- **Project Description (Brief)**

Chambers of treasure is a loot based dungeon crawler where you are sent to a dungeon to strike it rich.

Unfortunately that dungeon is full of cultists trying to stop you from profiting. The longer you dive the more dangerous it gets but the more you will find.

Every run in the dungeon you return from will grant you more powers to strike out again. Eventually you will be able to uncover the secret resting at the heart of the dungeon.

- **Project Description (Detailed)**

<Four-Six paragraph project description>

The chambers of Trashure is a loot centric dungeon crawler with a heavy emphasis on stealth and creatively avoiding your enemies to survive another day. This is reinforced through the mechanics such as Clang extract, boons, and offerings. With this the player is expected to grow in and out of the game to allow them to progress as they master the dungeon and its multitude of secrets.

Boons and extraction are the primary way of rewarding the player for investing into the game. Boons are found across the map and if the player successfully Extracts from the map, without getting caught by the cult. Then they will be able to activate the Boon in their next run. Extracts can be found across the map, however only one will ever be known to the player, that being the starting location. The rest will be hidden by various buttons and will remain consistent but must be activated each run. With this the player will gain the strength to stay in the dungeon longer and loot the real treasure at the center of the dungeon.

Stealth is implemented via the enemy variable AI. It has 3 stages: Idle, hunting, and chasing. When idle it will stand sentry silently waiting for the player to cross its sight or for them to make a sound. It will then locate where the player was and move there in hunt mode. If it maintains contact with the player it enters chase and will actively chase the player until line of sight is broken, the player is not

at their previously seen location and is no longer heard to avoid hunting. This becomes troublesome due to the clang Mechanic.

All of this is to reinforce in the player a noncombative interaction with the enemy. Build a sense of horror and dread for the player and create a harrowing experience for them to enjoy. The light puzzles are to force the player to go out and explore, spending time in danger, making situations that they have to work their way out of.

What sets this project apart?

- defenseless stealth
- atmosphere
- Unique pairing of art styles and tone
- Light puzzle and exploration

Core Gameplay Mechanics (Detailed)

- Stealth Systems:
 - Stealth System 1: “Sound” Detection
 - Child to the Player game object is an empty transform with a trigger sphere collider attached to it. Initially, the radius of this zero is units. The radius of the detection sphere collider scales with how fast the player is currently moving. The player manager script takes the speed the player is moving and multiplies it by an integer value called Detection Trigger Multiplier; the product is the radius of the detection sphere. When an enemy enters a collision with the detection sphere, their pathfinding state will be set to Investigate mode. The Detection Trigger Multiplier will increase the longer the player remains in the chambers.
 - Stealth System 2: Visual Detection
 - Each enemy prefab will have a camera component attached to it. The camera is constantly checking to see if the player game object is in view of the detection camera. While the AI is in Idle state, the detection camera oscillates along the Y axis to increase the enemy’s field of detection. When the detection camera detects the player, the AI state is set to pursuit.
- CLANK System:
 - CLANK is how we increase the difficulty during a run. The system is essentially a stopwatch system that activates in-game events when time criteria have been met. The CLANK events that get fired will increase difficulty by adjusting multipliers and values in the player and enemy managers. If a player sets off too many triggers within a period of time, the script will add to the current CLANK timer value to increase the amount of time the player has been in a run.

- Offering Tasks:
 - Every time the player picks up an offering, their CLANK level will be increased. Forcing the player to perform an action that is detrimental to their raid survivability will strongly reinforce our emphasis on risk-reward gameplay. The difficulty spike also serves as a quasi-boss battle.
- The Final Offering:
 - After opening the door and picking up the final offering, the player's CLANK Level will be set to a special state. When this special CLANK state activates, two cultists will be spawned at the main entrance, and all enemies in the chambers become alerted to the player's presence
- Exit points:
 - When the player wishes to exit the chambers with their acquired loot, they must locate an exit.
 - Main- will always be on the map and marked on the compass
 - Hidden: Scattered across the edges of the map are unmarked exits. These exits are not marked on the player's compass and require the user to discover them while in the chambers. Hidden exits are persistent and always available so long as the player remembers how to solve the activation puzzle and where it is located.

Story and Gameplay

- **Story (Brief)**
 - You're in debt and desperate, get to the dungeon heart to be free.
- **Story (Detailed)**
 - You are in debt and an unknown person "helps" by telling you where items are in the dungeon, they get more annoyed as time goes on and when the player reaches the heart of the dungeon the call cultist to guard the exit
- **Gameplay (Brief)**
 - Repeatedly raid the dungeon to acquire better upgrades to make the final run collecting all the offerings and escape alive.
- **Gameplay (Detailed)**
 - The game is about going into a dungeon to loot it while avoiding cultists trying to stop you. You slink around trying to be quiet the longer you stay the harder that becomes. You are expected to make multiple runs to accumulate power and prepare your mental map for the final run.

Art Direction:

- The game will have dark elements like a dreary dungeon, a gloomy environment, and old items all overrun with cultists. The character(s) are going to be in chibi art style.

Assets Needed

- **2D**
 - Textures
 - Blessings
- **3D**
 - Character List
 - Cultist
 - player
 - Environmental Art Lists
 - Gilded crown
 - Dongen asset pack
 - Marked Rock
 - Sample maps
- **Sound**
 - Sound List (Ambient)
 - Outside
 - Level 1
 - Level 2
 - Level 3
 - etc.
 - Inside
 - Level 1
 - Level 2
 - Level 3
 - etc.
 - Sound List (Player)
 - Character Movement Sound List
 - Example 1
 - Example 2
 - etc.
 - Character Hit / Collision Sound list
 - Example 1
 - Example 2
 - etc.

- Character on Injured / Death sound list
 - Example 1
 - Example 2
 - etc.

- **Code**

- Character Scripts
- Ambient Scripts
 - Clang
 - Player Controller
- NPC Scripts
 - Idle
 - Searching
 - chase
 - catch.

- **Animation**

- Environment Animations
 - Door open, close
 - Lever,button interact
 - etc.
- Character Animations
 - Player
 - Walk
 - Run
 - Sneak
 - Pickup
 - NPC
 -
 - idle
 - Run

Schedule

- **<demo 1>**
 - 1 week
 - NPC chase code
 - Playercontroller, clank
- **<demo 2>**
 - 1 week
 - Start map integration
 - Enhance nav mesh
- **<demo 3>**
 - 1 week
 - Final map integration
 - Modular system implementation
- **<finish>**
 - 1 week
 - Player,cultist integration
 - Sound
 - Final touches

Playtest Notes dec 3

Add walls

To fast

Don't use control for crouch or have option to change

Playtest Notes Dec 10

notes on today's play testing: easier to press alt instead of ctrl for sneak Fix the sensitivity slider (min 500) Restart game button for the main menu?(maybe) Give player feedback about if they interacted with the object or not Put a cross on the screen Make Mouse cursor appear on main menu(?) And disappear in dungeon Add a text to explain the artifacts about what they are and how they work Animation or any kind of feedback that you interacted with the torches in the game Fix collisions of the walls Jumping on top of something will block the enemy from attacking you
